

**ASSEMBLER AND MONITOR****Pre-Lab**

## Questions to answer before lab:

- What is the difference between the MM and MMW commands?
  
- How would you change the values of the X accumulator to 0x55AA? (There are several ways to do this; you only need to find one way.)
  
- What will be the contents of the A register after each instruction of the program shown in Figure 1 executes?
