## Sinusoidal Signals

$$
\begin{aligned}
T & =\text { Period }(\mathrm{s}) \\
F & =\text { Frequency }(\mathrm{Hz})=1 / T \\
\omega & =\text { Angular frequency (rad } / \mathrm{sec})=2 \pi F \\
\theta & =\text { phase angle (rad) } \\
V_{p} & =\text { peak value } \\
t_{\max } & =\text { time from } 0 \text { to time at which } V_{p} \text { occurs } \\
V_{p p} & =\text { Peak-to-peak value }
\end{aligned}
$$

$$
\begin{equation*}
\theta=-2 \pi \frac{t_{\max }}{T}=-2 \pi t_{\max } F \tag{1}
\end{equation*}
$$
