In Collaboration with Stephen Bruder Electrical and Computer Engineering Department Embry-Riddle Aeronautical Univesity, Prescott, Arizona, USA

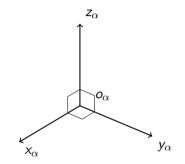

January 16, 2020

Kevin Wedewar	rd, Aly El-Osery (NMT)	EE 565: Position, N	avigation and Timing	January 16, 2020	1 / 18

Right-hand Cartesian coordinate frame $\boldsymbol{\alpha}$ has

- origin o_{α} at which frame is located, and
- **②** orthonormal vectors $x_{\alpha}, y_{\alpha}, z_{\alpha}$ that serve as axes and indicate positive directions.

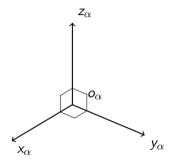

●00 000 000 000 000 000 000 000 000 000	oo oo January 16, 2020	00 2 / 18

This definition implies

$$\begin{aligned} x_{\alpha} \cdot x_{\alpha} &= y_{\alpha} \cdot y_{\alpha} = z_{\alpha} \cdot z_{\alpha} = 1 \\ x_{\alpha} \cdot y_{\alpha} &= y_{\alpha} \cdot z_{\alpha} = z_{\alpha} \cdot x_{\alpha} = 0 \\ x_{\alpha} \times y_{\alpha} &= z_{\alpha} \\ y_{\alpha} \times z_{\alpha} &= x_{\alpha} \\ z_{\alpha} \times x_{\alpha} &= y_{\alpha} \end{aligned}$$

Coordinate Frames

Coordinate frames used as means to describe position and orientation/attitude of one frame with respect to another.

Frames 000					
Kevin Wedev	vard, Aly El-Osery (NMT)	EE 565: Position, Na	wigation and Timing	January 16,	2020 4 / 18

ECI Frame

- defined as an inertial frame, i.e., it is assumed not to accelerate or rotate with respect to the universe
 - effects of earth's orbit around sun and motion of the galaxy are very small (smaller than can be measured with inertial sensors) and neglected
 - ECI will be attached to earth, but won't spin with earth
- inertial sensors measure "inertial" motion relative to ECI frame
 - Gyroscopes measure rate of change of orientation
 - Accelerometers measure linear acceleration
- referred to as *i*-frame

	ECI ●oo				
Kevin Wedew	ard, Aly El-Osery (NMT)	EE 565: Position, Na	avigation and Timing	January 16, 2	.020 5 / 18

ECI Frame

- origin o_i of ECI is located near the center of mass (center of ellipsoidal representation) of the earth
- z_i -axis points along the nominal axis of rotation of the earth
 - true north **not** magnetic north!
 - spin axis moves in circular path with radius of 15 meters, which we'll neglect and use average value
- x_i -axis lies in the equatorial plane and points from the earth to the sun at the vernal (spring) equinox (point in time when sun is in the equatorial plane)
 - defined by the intersection (a line) of the equatorial plane and the earth-sun orbital plane
- y_i -axis chosen to complete right hand coordinate system (90° ahead of x_i in direction of earth's rotation)

	ECI				
	000				
Kevin Wedew	ard, Aly El-Osery (NMT)	EE 565: Position, Na	avigation and Timing	January '	16, 2020 6 / 18

ECI Frame

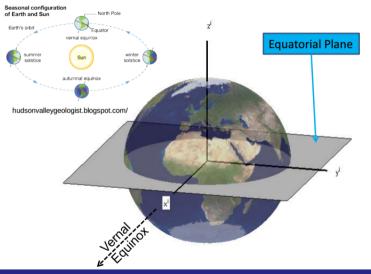

- origin o_i of ECI is located near the center of mass (center of ellipsoidal representation) of the earth
- z_i -axis points along the nominal axis of rotation of the earth
 - true north **not** magnetic north!
 - spin axis moves in circular path with radius of 15 meters, which we'll neglect and use average value
- x_i -axis lies in the equatorial plane and points from the earth to the sun at the vernal (spring) equinox (point in time when sun is in the equatorial plane)
 - defined by the intersection (a line) of the equatorial plane and the earth-sun orbital plane
- y_i -axis chosen to complete right hand coordinate system (90° ahead of x_i in direction of earth's rotation)

The ECI coordinate frame does not rotate with the earth

ECEF Frame

- not an inertial frame
- fixed with respect to the earth, i.e., attached to the earth and spins with earth
- referred to as *e*-frame

		ECEF			
		000			
Kevin Wedewa	ard, Aly El-Osery (NMT)	EE 565: Position, N	Navigation and Timing	January 1	6, 2020 8 / 18

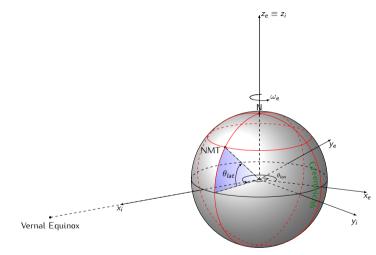

- origin o_e is located (nearly) at the center of the mass of the earth (co-located with ECI's o_i)
- z_e -axis points along the nominal axis of earth's rotation (same as ECI's z_i)
- x_e -axis lies at the intersection of the equatorial plane and the reference meridian plane (i.e., Greenwich/Prime Meridian)
 - tied to concept of latitude and longitude
 - x_e points from o_e towards 0° longitude and 0° latitude (a little west of central Africa)
- y_e -axis is chosen to complete right hand coordinate system

Nav Frame

- typically **not** fixed with respect to the earth, i.e., free to move, but has specified orientation
- also called geodetic, geographic, locally level, or tangential frame
- referred to as *n*-frame

			Nav		
			000		
Kevin Wedewa	ard, Aly El-Osery (NMT)	EE 565: Position, Na	avigation and Timing	January 16,	2020 11 / 18

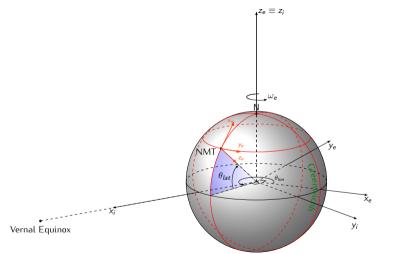

- origin o_n is located at the center of mass of the body (e.g., air, land or sea vehicle) of interest
- z_n -axis points "down" normal to the earth's surface (approximately towards the center of the earth)
- $x_n y_n$ axes then constrained to lie in plane locally-level (tangential) to the earth's surface
 - x_n -axis points to the north pole
 - y_n -axis is chosen to complete right hand coordinate system
- frame's configuration is often referred to as the NED frame
 - $x_n \rightarrow \text{North}, y_n \rightarrow \text{East}, \text{ and } z_n \rightarrow \text{Down}$

Body Frame

- attached to moving body (e.g., land, air or sea vehicle) and moves (position and orientation/attitute) with body
- origin o_b located at the center of mass of the body (co-located with Nav frame's o_n)
- x_b-axis points "forward" wrt moving body
- *z_b*-axis points loosely "down"
 - varies with the roll/pitch of the vehicle
- y_b-axis chosen to complete right hand coordinate system
- referred to as *b*-frame

Body Frame

- Wander Azimuth Frame (alternative to the Nav frame)
 - does not always point north (x- and y- axes displaced from north and east by an angle that varies with location on the earth) to avoid numerical stability problems near the poles
- Local Tangential Frame
 - typically, refers to another type of ECEF frame fixed to the Earth's surface (not moving like the *n*-frame)
 - tangent to the Earth's surface and often aligned with environmental feature such as a building, field, room or road
- Sensor/Instrument Frame
 - attached to body of sensor that may be displaced from a vehicle's center of mass
