## EE 231 - Homework 2

## Due September 10, 2010

1. Convert the decimal numbers +75 and +32 to 8 -bit hexadecimal numbers, unsing the signed 2's complement representation. Then perform the following operations: (a) $(+75)+(-32)$, (b) $(-75)+(+32)$, (c) $(-75)+(-32)$. Convert the answers back to decimal and verify that they are correct.
2. Convert the following binary numbers to ASCII code:

10011101100101111011101000001001101110010111110001101001
1100011110111101000001011000110010111000111101000
3. By means of a timing diagram similar to Figure 1.5, show the signals of the outputs $f$ and $g$ in the figure below as functions of the two inputs $a$ and $b$. Use all four possible combinations of $a$ and $b$.

4. Use Boolean algebra to prove that the following Boolean equalities are true:
(a) $a^{\prime} b^{\prime}+a b^{\prime}+a^{\prime} b=a^{\prime}+b^{\prime}$
(b) $a b c+b c^{\prime}=b\left(a+c^{\prime}\right)$
(c) $(a+b)^{\prime} b c=0$
(d) $\left(a b^{\prime}+a^{\prime} b\right)^{\prime}=a^{\prime} b^{\prime}+a b$
(e) $\left[\left(a+b\left(c+a^{\prime}\right)\right]^{\prime}=a^{\prime} b^{\prime}\right.$
5. Simplify the following Boolean expressions to a minumum number of operators
(a) $\left[\left(a^{\prime}+b c^{\prime}\right) d^{\prime}\right]^{\prime}$
(b) $\left\{(a b+c)\left[(a b)^{\prime}+c^{\prime}\right]\right\}^{\prime}$
(c) $(x+y)^{\prime}\left(x^{\prime}+y^{\prime}\right)^{\prime}$
(d) $a b c^{\prime}+a^{\prime} b c^{\prime}+a^{\prime} b^{\prime} c^{\prime}$
6. Draw logic diagrams of the circuits that implement the original and simplified expressions in Problem 5 (c) and (d)
7. Find the complements of the following expressions:
(a) $\left(x+y^{\prime}\right)\left(x^{\prime}+y\right)$
(b) $\left(A^{\prime} B+C D\right) E+E^{\prime}$
(c) $\left(x^{\prime}+y^{\prime}+z\right)(x+y)\left(x+z^{\prime}\right)$
