

EE 308 – Homework 6

Due Feb. 28, 2005

For all problems below assume you are using a MCS12DP256 chip with a 24 MHz bus clock and a 4 MHz oscillator clock.

1. The table below shows the contents of the stack for an HCS12. Identify the return address to the main program if:
 - (a) The HCS12 is in a subroutine which was called by another subroutine. (The subroutines did not put anything else onto the stack.)
 - (b) The HCS12 is in an interrupt service routine that interrupted the main program. What was the value of the X register at the time of the interrupt?
 - (c) The HCS12 is in a subroutine that pushed both X and Y onto the stack.

2. The prescaler bits of the TSCR2 register are set to $PR2:0 = 110$. The first time the TCNT register is read the value is $0x2345$. The next time the TCNT register is read, the value is $0xCDEF$. Assuming the time between reads was less than the overflow period of the counter, how much time (in seconds) passed between the two reads?
3. The prescaler bits of the TSCR2 register are set to $PR2:0 = 110$. The first time the TCNT register is read the value is $0xCDEF$. The next time the TCNT register is read, the value is $0x2345$. Assuming the time between reads was less than the overflow period of the counter, how much time (in seconds) passed between the two reads?

4. An HC12 has the following data in its memory:

	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
FFC0	CC	05	9F	CD	99	03	84	9C	01	9B	CC	90	66	FC	93	30
FFD0	7E	E3	4B	7E	E5	38	21	54	05	83	09	34	2A	38	3C	03
FFE0	41	38	66	F2	7C	13	37	0C	25	F2	0C	38	5F	1B	42	1A
FFF0	7A	26	21	13	6A	AA	20	1F	4B	38	33	38	45	38	10	20

- What happens to the program counter when the HC12 is powered up or reset? What is the address of the first instruction the HC12 will execute after a reset?
 - What is the address of the first instruction the HC12 will execute when it receives a Timer Overflow interrupt?
 - What is the address of the first instruction the HC12 will execute when it receives a SPI0 interrupt?
 - What is the address of the first instruction the HC12 will execute when it receives a Real Time interrupt?
5. Below are the values of some timer registers in the HC12:

TSCR1	TSCR2	TCTL1	TCTL2	TCTL3	TCTL4	TFLG1	TFLG2
80	85	A4	C2	5F	76	21	80

- Is the Timer enabled?
 - Is the Timer Overflow Interrupt enabled?
 - Is the Timer Overflow Flag set?
 - What is the overflow time for the TCNT register?
- Write some assembly language code which will enable the timer subsystem, set the timer overflow rate to 175 ms, and enable the timer overflow interrupt.
 - Write some C code which will enable the timer subsystem, set the timer overflow rate to 175 ms, and enable the timer overflow interrupt.
 - Write some assembly language code which will enable the real time interrupt, set the real time interrupt rate to 66 ms, and enable the real time interrupt.
 - Write some C code which will enable the real time interrupt, set the real time interrupt rate to 66 ms, and enable the real time interrupt.
